## Tech commentaries:

The **Xtrackers Lpx Private Equity Swap Ucits** ETF price gained **0.622%** on the last trading day (Friday, 28th Jun 2024), rising from **122.20€** to **122.96€**. During the last trading day the ETF fluctuated **0.586%** from a day low at **122.88€** to a day high of **123.60€**. The price has fallen in 6 of the last 10 days but is still up by **0.69%** over the past 2 weeks. Volume fell on the last day by **-2 thousand** shares and in total, **2 thousand** shares were bought and sold for approximately **232.76€** thousand. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF lies in the middle of a narrow and weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **4.67%** during the next 3 months and, with a 90% probability hold a price between **126.60€** and **132.00€** at the end of this 3-month period.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Xtrackers Lpx Private Equity Swap Ucits** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. On corrections up, there will be some resistance from the lines at **123.37€** and **123.04€**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Wednesday, June 12, 2024**, and so far it has fallen **-1.65%**. Further fall is indicated until a new bottom pivot has been found. Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may also not.

**Xtrackers Lpx Private Equity Swap Ucits** finds support from accumulated volume at **122.64€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **123.30€**, **124.04€** and **124.20€**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF. During the last day, the ETF moved **0.720€** between high and low, or **0.586%**. For the last week the ETF has had daily average volatility of **0.83%**.

**Xtrackers Lpx Private Equity Swap Ucits** holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: **Low**

Evaluation: **Hold/Accumulate**
