MACD: **Sell**

## Tech commentaries:

The **Ishares Msci Japan Esg Enhanced Ucits** ETF price gained **1.49%** on the last trading day (Friday, 28th Jun 2024), rising from **6.24€** to **6.34€**. During the last trading day the ETF fluctuated **1.29%** from a day low at **6.28€** to a day high of **6.36€**. The price has risen in 6 of the last 10 days and is up by **2.16%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **212 thousand** more shares were traded than the day before. In total, **298 thousand** shares were bought and sold for approximately **1.89€** million.

The ETF has broken the falling short-term trend up. Firstly a slower falling rate is indicated, but this may very well be an early signal of a trend shift. On the reaction, there will be support on the roof of the current trend broken, which is **6.32€** a level that may pose a second chance to hit a runner. According to fan-theory **6.64€** will be the next possible trend-top level and thereby pose a resistance level that may not be broken at the first attempt.

The **Ishares Msci Japan Esg Enhanced Ucits** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the ETF has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **6.21€** and **6.22€**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Friday, June 21, 2024**, and so far it has risen 3.75%. Further rise is indicated until a new top pivot has been found. Volume is rising along with the price. This is considered to be a good technical signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

**Ishares Msci Japan Esg Enhanced Ucits** finds support from accumulated volume at **6.27€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **6.35€**, **6.40€** and **6.41€**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **0.0810€** between high and low, or **1.29%**. For the last week the ETF has had daily average volatility of **0.741%**.

Several short-term signals are positive and the break-up from the falling trend indicates a possible shift for a trend. We believe that the prices around the breaking point will indicate particularly good levels, but we also believe that the current level will hold a possible good buy level for the short-term period. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Hold/Accumulate to a Buy candidate.

Risk: **Low**

Evaluation: **Buy Candidate**
