Tech commentaries:

The **Bnp Paribas Easy Ftse Epra Nareit** ETF price fell by **-0.85%** on the last day (Tuesday, 25th Jun 2024) from **6.72€** to **6.66€**. During the last trading day the ETF fluctuated **0.89%** from a day low at **6.66€** to a day high of **6.71€**. The price has fallen in 6 of the last 10 days and is down by **-0.89%** for this period. Volume has increased on the last day by **108** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **308** shares were bought and sold for approximately **2.05€** thousand.

The ETF lies in the lower part of a weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **6.56€** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the ETF is expected to rise **3.51%** during the next 3 months and, with a 90% probability hold a price between **6.79€** and **7.41€** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Wednesday, June 19, 2024**, and so far it has risen **0.756%**. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Bnp Paribas Easy Ftse Epra Nareit** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **6.67€** and **6.87€**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Bnp Paribas Easy Ftse Epra Nareit** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs". The very low volume increases the risk and reduces the other technical signals issued.

Bnp Paribas Easy Ftse Epra Nareit finds support from accumulated volume at **6.53€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **6.84€**, **6.87€** and **6.97€**.

This ETF is usually traded at a good volume, and with minor daily changes, the risk is considered to be low. During the last day, the ETF moved **0.0590€ (0.89%)** between high and low. For the last week, the ETF has had daily average volatility of **1.05%**.

The **Bnp Paribas Easy Ftse Epra Nareit** ETF holds several negative signals and despite the positive trend, we believe **Bnp Paribas Easy Ftse Epra Nareit** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this ETF. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this ETF since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: **Low**

Evaluation: **Sell Candidate**
