During the last trading day the stock fluctuated **2.69%** from a day low at **\$18.60** to a day high of **\$19.10**. The price has risen in 7 of the last 10 days and is up by **12.96%** over the past 2 weeks. Volume fell on the last day by **-52 thousand** shares and in total, **182 thousand** shares were bought and sold for approximately **\$3.45** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

Given the current short-term trend, the stock is expected to fall **-21.92%** during the next 3 months and, with a 90% probability hold a price between **\$12.01** and **\$14.83** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

Mostly positive signals in the chart today. The **Eagle Bancorp** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the stock has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **\$18.09** and **\$18.17**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Friday, June 14, 2024**, and so far it has risen 16.35%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The stock should be watched closely.

**Eagle Bancorp** finds support from accumulated volume at **\$18.96** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$19.76**, **\$19.96** and **\$21.20**.

This stock has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the stock moved **\$0.500** between high and low, or **2.69%**. For the last week, the stock has had daily average volatility of **3.84%**.

Several short-term signals are positive, despite the stock being in a falling trend, we conclude that the current level may hold a buying opportunity as there is a fair chance for stock to perform well in the short-term.

**Risk: Medium**
