Tech commentaries:

The **Centrais Elétricas Brasileiras S.A.** - stock price fell by **-0.598%** on the last day (Friday, 17th May 2024) from **R\$38.43** to **R\$38.20**. During the last trading day the stock fluctuated **1.05%** from a day low at **R\$37.95** to a day high of **R\$38.35**. The price has risen in 6 of the last 10 days but is still down by **-1.93%** for this period. Volume has increased on the last day by **447 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **6 million** shares were bought and sold for approximately **R\$241.76 million**.

The stock lies the upper part of a wide and falling trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break up at the top trend line at **R\$38.76** will firstly indicate a slower falling rate, but may be the first sign of a trend shift. Given the current short-term trend, the stock is expected to fall **-16.17%** during the next 3 months and, with a 90% probability hold a price between **R\$29.13** and **R\$32.49** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

A buy signal was issued from a pivot bottom point on **Wednesday, April 24, 2024**, and so far it has risen 3.92%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Centrais Elétricas Brasileiras S.A.** - stock holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the longterm average is above the short-term average there is a general sell signal in the stock giving a more negative forecast for the stock. On further gains, the stock will meet resistance from the long-term Moving Average at **R\$38.83**. On a fall, the stock will find some support from the short-term average at **R\$38.14**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely.

Centrais Elétricas Brasileiras S.A. - finds support from accumulated volume at **R\$38.11** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **R\$38.84**, **R\$43.00** and **R\$43.60**.

This stock is usually traded at a good volume, and with minor daily changes, the risk is considered to be low. During the last day, the stock moved **R\$0.400 (1.05%)** between high and low. For the last week, the stock has had daily average volatility of **1.68%**.

Centrais Elétricas Brasileiras S.A. - holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this stock. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: Low
