## Tech commentaries:

The **Ishares Msci Europe Mid Cap Ucits Etf** ETF price gained **0.89%** on the last trading day (Wednesday, 26th Jun 2024), rising from **6.21€** to **6.27€**. During the last trading day the ETF fluctuated **0.304%** from a day low at **6.25€** to a day high of **6.27€**. The price has risen in 6 of the last 10 days but is still down by **-0.02%** for this period. Volume fell on the last day by **-17 thousand** shares and in total, **40** shares were bought and sold for approximately **250.76€**. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF lies in the middle of a narrow and weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **4.54%** during the next 3 months and, with a 90% probability hold a price between **6.44€** and **6.75€** at the end of this 3-month period.

There are few to no technical positive signals at the moment. The **Ishares Msci Europe Mid Cap Ucits Etf** ETF holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the long-term average is above the short-term average there is a general sell signal in the ETF giving a more negative forecast for the stock. On further gains, the ETF will meet resistance from the long-term Moving Average at **6.29€**. On a fall, the ETF will find some support from the short-term average at **6.22€**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. A sell signal was issued from a pivot top point on **Monday, June 03, 2024**, and so far it has fallen **-1.77%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may not be. The very low volume increases the risk and reduces the other technical signals issued.

**Ishares Msci Europe Mid Cap Ucits Etf** finds support from accumulated volume at **6.12€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **6.32€**, **6.35€** and **6.37€**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF. During the last day, the ETF moved **0.0190€** between high and low, or **0.304%**. For the last week the ETF has had daily average volatility of **0.372%**.

The **Ishares Msci Europe Mid Cap Ucits Etf** ETF holds several negative signals and despite the positive trend, we believe **Ishares Msci Europe Mid Cap Ucits Etf** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this ETF.

Risk: **Low**

Evaluation: **Sell Candidate**
