Tech commentaries:

The **EML Payments Limited** stock price gained **1.09%** on the last trading day (Friday, 28th Jun 2024), rising from **\$0.92** to **\$0.93**. During the last trading day the stock fluctuated **3.64%** from a day low at **\$0.91** to a day high of **\$0.94**. The price has risen in 5 of the last 10 days and is up by **2.76%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **129 thousand** more shares were traded than the day before. In total, **955 thousand** shares were bought and sold for approximately **\$887.91** thousand.

The stock lies in the middle of a wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the stock is expected to fall **-15.05%** during the next 3 months and, with a 90% probability hold a price between **\$0.729** and **\$0.87** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

There are mixed signals in the stock today. The **EML Payments Limited** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$0.94** and **\$0.96**. A break-up above any of these levels will issue buy signals. A buy signal was issued from a pivot bottom point on **Monday, June 17, 2024**, and so far it has risen 5.08%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). **EML Payments Limited** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. Higher liquidity also reduces the general risk.

EML Payments Limited finds support from accumulated volume at **\$0.93** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$0.98**, **\$1.00** and **\$1.03**.

This stock has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the stock moved **\$0.0330** between high and low, or **3.64%**. For the last week, the stock has had daily average volatility of **3.98%**.

EML Payments Limited holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this stock.

Risk: **Medium**

Evaluation: **Sell Candidate**
