MACD: Sell

Tech commentaries:

The **Ishares Msci Europe Esg Enhanced Ucits** ETF price fell by **-0.146%** on the last day (Tuesday, 25th Jun 2024) from **6.83€** to **6.82€**. During the last trading day the ETF fluctuated **0.309%** from a day low at **6.80€** to a day high of **6.82€**. The price has been going up and down for this period, and there has been a **-1.67%** loss for the last 2 weeks. Volume has increased on the last day by **27 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **68 thousand** shares were bought and sold for approximately **461.81€** thousand.

The ETF lies in the lower part of a weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **6.76€** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the ETF is expected to rise **4.68%** during the next 3 months and, with a 90% probability hold a price between **7.07€** and **7.43€** at the end of this 3-month period.

There are mixed signals in the ETF today. The **Ishares Msci Europe Esg Enhanced Ucits** ETF holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the long-term average is above the short-term average there is a general sell signal in the ETF giving a more negative forecast for the stock. On further gains, the ETF will meet resistance from the long-term Moving Average at **6.91€**. On a fall, the ETF will find some support from the short-term average at **6.79€**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Ishares Msci Europe Esg Enhanced Ucits** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs". A buy signal was issued from a pivot bottom point on **Friday, June 14, 2024**, and so far it has risen 1.46%. Further rise is indicated until a new top pivot has been found.

Ishares Msci Europe Esg Enhanced Ucits finds support from accumulated volume at **6.79€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **6.93€**, **6.94€** and **7.01€**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **0.0210€** between high and low, or **0.309%**. For the last week the ETF has had daily average volatility of **0.661%**.

Ishares Msci Europe Esg Enhanced Ucits holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this ETF. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this ETF since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: **Low**
