## Tech commentaries:

The **Epitomee Medical Ltd** stock price fell by **-7.08%** on the last day (Thursday, 27th Jun 2024) from **340.40** to **316.30**. During the last trading day the stock fluctuated **9.45%** from a day low at **311.00** to a day high of **340.40**. The price has fallen in 6 of the last 10 days and is down by **-0.94%** for this period. Volume has increased on the last day by **315** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **23** thousand shares were bought and sold for approximately **77.22** million.

The stock lies in the lower part of a very wide and weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **298.36** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the stock is expected to rise **7.61%** during the next 3 months and, with a 90% probability hold a price between **321.06** and **462.04** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Thursday, June 20, 2024**, and so far it has risen 6.97%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Epitomee Medical Ltd** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **317.27** and **331.29**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely.

**Epitomee Medical Ltd** finds support from accumulated volume at **309.80** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance from accumulated volume at **340.10**, **356.50** and **366.70**.

This stock has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the stock moved **29.40** between high and low, or **9.45%**. For the last week, the stock has had daily average volatility of **8.35%**.

The Epitomee Medical Ltd stock holds several negative signals and despite the positive trend, we believe **Epitomee Medical Ltd** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this stock. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: **Medium**

Evaluation: **Sell Candidate**
