Tech commentaries:

The **Vaneck Vectors Video Gaming And Esports** ETF price gained **2.53%** on the last trading day (Friday, 3rd May 2024), rising from **\$61.61** to **\$63.17**. During the last trading day the ETF fluctuated **1.69%** from a day low at **\$62.12** to a day high of **\$63.17**. The price has risen in 7 of the last 10 days and is up by **8.82%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **138** more shares were traded than the day before. In total, **13** thousand shares were bought and sold for approximately **\$825.38** thousand.

The ETF is at the upper part of a horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **\$63.64** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **Vaneck Vectors Video Gaming And Esports** ETF with a 90% probability to be traded between **\$57.28** and **\$62.93** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFs seldom manage to go directly from the bottom of a trend up to the top. ETFs turning up in the middle of a horizontal trend are therefore considered to be potential runners. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

Mostly positive signals in the chart today. The **Vaneck Vectors Video Gaming And Esports** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the ETF has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **\$60.96** and **\$61.11**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Friday, April 19, 2024**, and so far it has risen 8.82%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). **Vaneck Vectors Video Gaming And Esports** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. Higher liquidity also reduces the general risk.

Vaneck Vectors Video Gaming And Esports finds support from accumulated volume at **\$61.59** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$63.18**, **\$63.94** and **\$64.06**.

This ETF is usually traded at a good volume, and with minor daily changes, the risk is considered to be low. During the last day, the ETF moved **\$1.05 (1.69%)** between high and low. For the last week, the ETF has had daily average volatility of **1.22%**.

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for **Vaneck Vectors Video Gaming And Esports** ETF to perform well in the short-term period.

Risk: **Low**

Evaluation: **Buy Candidate**
