Tech commentaries:

The **Ossiam Shiller Barclays Cape Europe** ETF price fell by **-0.537%** on the last day (Thursday, 27th Jun 2024) from **521.30€** to **518.50€**. It has now fallen 3 days in a row. During the last trading day the ETF fluctuated **1.33%** from a day low at **518.50€** to a day high of **525.40€**. The price has fallen in 6 of the last 10 days and is down by **-0.27%** for this period.

The ETF lies in the lower part of a narrow and weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **514.99€** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the ETF is expected to rise **3.82%** during the next 3 months and, with a 90% probability hold a price between **534.68€** and **553.43€** at the end of this 3-month period.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Ossiam Shiller Barclays Cape Europe** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **521.29€** and **521.76€**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Thursday, June 06, 2024**, and so far it has fallen **-1.86%**. Further fall is indicated until a new bottom pivot has been found. Volume fell along with the price during the last trading day which is technical positive. One should, however, note that this ETF may have low liquidity in periods, which increases the general risk. The very low volume increases the risk and reduces the other technical signals issued.

Ossiam Shiller Barclays Cape Europe finds support from accumulated volume at **516.10€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **519.30€**, **521.50€** and **523.40€**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF. During the last day, the ETF moved **6.90€** between high and low, or **1.33%**. For the last week the ETF has had daily average volatility of **0.84%**.

Ossiam Shiller Barclays Cape Europe holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Low**

Evaluation: **Hold/Accumulate**
