## Tech commentaries:

The **EveryCoin USD** stock price gained **8.33%** on the last trading day (Wednesday, 3rd Jul 2024), rising from **\$0.000012** to **\$0.000013**. It has now gained 3 days in a row. It will be exciting to see whether it manages to continue gaining or take a minor break for the next few days. During the last trading day the stock fluctuated **62.50%** from a day low at **\$0.000008** to a day high of **\$0.000013**. The price has risen in 6 of the last 10 days and is up by **85.71%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **68** more shares were traded than the day before. In total, **950** shares were bought and sold for approximately **\$0.0124**.

The stock has broken the very wide and falling short-term trend up. Firstly a slower falling rate is indicated, but this may very well be an early signal of a trend shift. On the reaction, there will be support on the roof of the current trend broken, which is **\$0.00001012**, a level that may pose a second chance to hit a runner. According to fan-theory **\$0.00001520** will be the next possible trend-top level and thereby pose a resistance level that may not be broken at the first attempt.

Mostly positive signals in the chart today. The **EveryCoin USD** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$0.000009** and **\$0.00000793**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Sunday, June 30, 2024**, and so far it has risen 85.71%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). **EveryCoin USD** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. The very low volume increases the risk and reduces the other technical signals issued.

On the downside, the stock finds support just below today's level from accumulated volume at **\$0.000012** and **\$0.000011**. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this stock is considered to be "very high risk". During the last day, the stock moved **\$0.000005** between high and low, or **62.50%**. For the last week, the stock has had daily average volatility of **64.64%**.

**EveryCoin USD** holds several positive signals and the break up from the falling trend indicates a possible shift of trend as well. The trend doesn't have to go from falling to rising, it may as well go horizontal or even just decrease the earlier fall rate, but we find the risk-reward to be attractive and expect the stock to perform very well in the short term period.

**Risk: Very High**

**Evaluation: Strong Buy Candidate**
