Tech commentaries:

No changes to the price of **First Trust Europe AlphaDEX Fund** ETF on the last trading day (Wednesday, 1st May 2024). During the last trading day the ETF fluctuated **2.63%** from a day low at **\$36.43** to a day high of **\$37.39**. The price has risen in 6 of the last 10 days and is up by **1.6%** over the past 2 weeks.

The ETF lies in the lower part of a weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at \$36.55 is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the ETF is expected to rise **5.81%** during the next 3 months and, with a 90% probability hold a price between **\$38.67** and **\$40.90** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Tuesday, April 16, 2024**, and so far it has risen 2.08%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **First Trust Europe AlphaDEX Fund** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$37.21** and **\$37.22**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point".

First Trust Europe AlphaDEX Fund finds support from accumulated volume at \$36.47 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$37.54**, **\$37.81** and **\$37.84**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF. During the last day, the ETF moved **\$0.96** between high and low, or **2.63%**. For the last week the ETF has had daily average volatility of **1.27%**.

The First Trust Europe AlphaDEX Fund ETF holds several negative signals and despite the positive trend, we believe **First Trust Europe AlphaDEX Fund** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this ETF.

Risk: **Low**

Evaluation: **Sell Candidate**
