## Tech commentaries:

The **Barclays ETN FI Enhanced Europe 50 ETN** stock price fell by **-0.319%** on the last day (Friday, 28th Jun 2024) from **\$25.04** to **\$24.96**. During the last trading day the stock fluctuated **0.683%** from a day low at **\$24.88** to a day high of **\$25.05**. The price has been going up and down for this period, and there has been a **-3.29%** loss for the last 2 weeks. Volume has increased on the last day by **3 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **6 thousand** shares were bought and sold for approximately **\$158.80** thousand.

The stock has broken the horizontal trend down. Breaks like this are often followed by swift and strong movements, and any correction down to the breakline at approximately **\$25.10** is considered to be a "second chance" to get out before further fall. It is, however, important to note that false breaks may appear and that the price may move back into the horizontal trend. A break on increasing volume is considered to be more significant and reliable than breaks on low volume.

There are few to no technical positive signals at the moment. The **Barclays ETN FI Enhanced Europe 50 ETN** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$25.18** and **\$26.14**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Wednesday, May 15, 2024**, and so far it has fallen **-7.28%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Barclays ETN FI Enhanced Europe 50 ETN** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs".

**Barclays ETN FI Enhanced Europe 50 ETN** finds support from accumulated volume at **\$24.92** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$25.17**, **\$25.99** and **\$26.81**.

This stock is usually traded at a good volume, and with minor daily changes, the risk is considered to be low. During the last day, the stock moved **\$0.170 (0.683%)** between high and low. For the last week, the stock has had daily average volatility of **0.503%**.

**Barclays ETN FI Enhanced Europe 50 ETN** holds several negative signals and is within a falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this stock.

Risk: **Low**

Evaluation: **Sell Candidate**
