MACD:	Buy

## Tech commentaries:

The **Franklin FTSE Switzerland** ETF price fell by **-1.44%** on the last day (Tuesday, 30th Apr 2024) from **\$31.76** to **\$31.30**. During the last trading day the ETF fluctuated **0.256%** from a day low at **\$31.30** to a day high of **\$31.38**. The price has risen in 6 of the last 10 days and is up by **0.61%** over the past 2 weeks. Volume fell on the last day along with the ETF, which is actually a good sign as volume should follow the ETF. On the last day, the trading volume fell by **-5 thousand** shares and in total, **3 thousand** shares were bought and sold for approximately **\$82.04** thousand.

The ETF lies in the lower of a falling trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **\$30.99** is broken, it will firstly indicate a stronger fall rate. Given the current short-term trend, the ETF is expected to fall **-2.18%** during the next 3 months and, with a 90% probability hold a price between **\$30.31** and **\$32.48** at the end of this 3-month period.

There are mixed signals in the ETF today. The **Franklin FTSE Switzerland** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$31.72** and **\$32.25**. A break-up above any of these levels will issue buy signals. Volume fell along with the price during the last trading day which is technical positive. One should, however, note that this ETF may have low liquidity in periods, which increases the general risk. The very low volume increases the risk and reduces the other technical signals issued. A buy signal was issued from a pivot bottom point on **Tuesday, April 16, 2024**, and so far it has risen 0.611%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD).

**Franklin FTSE Switzerland** finds support from accumulated volume at **\$31.17** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$31.39**, **\$31.59** and **\$31.98**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF. During the last day, the ETF moved **\$0.0800** between high and low, or **0.256%**. For the last week the ETF has had daily average volatility of **0.310%**.

**Franklin FTSE Switzerland** holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: **Low**

Evaluation: **Hold/Accumulate**
