Tech commentaries:

The **First Northwest Bancorp** stock price fell by **-7.24%** on the last day (Tuesday, 30th Apr 2024) from **\$11.05** to **\$10.25**. During the last trading day the stock fluctuated **9.74%** from a day low at **\$10.16** to a day high of **\$11.15**. The price has been going up and down for this period, and there has been a **-10.17%** loss for the last 2 weeks. Volume has increased on the last day by **29 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **41** thousand shares were bought and sold for approximately **\$416.54** thousand.

The stock lies in the lower of a very wide and falling trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **\$9.82** is broken, it will firstly indicate a stronger fall rate. Given the current short-term trend, the stock is expected to fall **-18.35%** during the next 3 months and, with a 90% probability hold a price between **\$8.02** and **\$11.97** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Thursday, April 18, 2024**, and so far it has fallen 0%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **First Northwest Bancorp** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$10.78** and **\$13.61**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **First Northwest Bancorp** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs".

There is no support from accumulated volume below today's level and given the right condition the stock may perform very badly in the next couple of days. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$10.64**, **\$11.28** and **\$11.60**.

This stock may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this stock is considered to be "very high risk". During the last day, the stock moved **\$0.99** between high and low, or **9.74%**. For the last week, the stock has had daily average volatility of **5.63%**.

First Northwest Bancorp holds several negative signals and is within a very wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this stock.

Risk: Very High

Evaluation: Sell Candidate
