## Tech commentaries:

The **Alpha Impact USD** cryptocurrency price gained **0.0597%** on the last trading day (Monday, 13th May 2024), rising from **\$0.0076** to **\$0.0076**. During the last trading day the cryptocurrency fluctuated **3.23%** from a day low at **\$0.0075** to a day high of **\$0.0078**. The price has been going up and down for this period, and there has been a **-5.72%** loss for the last 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **69** more shares were traded than the day before. In total, **637** shares were bought and sold for approximately **\$4.87**.

The cryptocurrency lies in the lower part of a very wide and strong rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **\$0.0075** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the cryptocurrency is expected to rise **173.00%** during the next 3 months and, with a 90% probability hold a price between **\$0.0206** and **\$0.0387** at the end of this 3-month period.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). **Alpha Impact USD** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. The very low volume increases the risk and reduces the other technical signals issued. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Alpha Impact USD** cryptocurrency holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$0.0078** and **\$0.0085**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Sunday, March 31, 2024**, and so far it has fallen - **22.36%**. Further fall is indicated until a new bottom pivot has been found.

**Alpha Impact USD** finds support from accumulated volume at **\$0.0076** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the cryptocurrency meets some resistance from accumulated volume at **\$0.0083**, **\$0.0085** and **\$0.0091**.

This cryptocurrency has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the cryptocurrency moved **\$0.0002** between high and low, or **3.23%**. For the last week, the cryptocurrency has had daily average volatility of **3.13%**.

The Alpha Impact USD cryptocurrency holds several negative signals and despite the positive trend, we believe **Alpha Impact USD** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this cryptocurrency.

Risk: **Medium**

Evaluation: **Sell Candidate**
