Tech commentaries:

The **Fidelity Us Quality Income Etf** ETF price gained **0.495%** on the last trading day (Friday, 28th Jun 2024), rising from **9.29€** to **9.33€**. During the last trading day the ETF fluctuated **0.226%** from a day low at **9.31€** to a day high of **9.33€**. The price has been going up and down for this period, and there has been a 0.72% gain for the last 2 weeks.

The ETF lies in the middle of a narrow and weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **7.18%** during the next 3 months and, with a 90% probability hold a price between **9.71€** and **10.18€** at the end of this 3-month period.

The **Fidelity Us Quality Income Etf** ETF holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the ETF giving a positive forecast for the stock. On further gains, the ETF will meet resistance from the short-term Moving Average at approximately **9.35€**. On a fall, the ETF will find some support from the long-term average at approximately **9.17€**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Wednesday, June 19, 2024**, and so far it has fallen -1.02%. Further fall is indicated until a new bottom pivot has been found. Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may not be. The very low volume increases the risk and reduces the other technical signals issued.

Fidelity Us Quality Income Etf finds support from accumulated volume at 9.03€ and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **9.38€**, **9.40€** and **9.42€**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF. During the last day, the ETF moved **0.0210€** between high and low, or **0.226%**. For the last week the ETF has had daily average volatility of **0.410%**.

Several short-term signals, along with a general good trend, are positive and we conclude that the current level may hold a buying opportunity as there is a fair chance for **Fidelity Us Quality Income Etf** ETF to perform well in the short-term. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Hold/Accumulate to a Buy candidate.

Risk: **Low**

Evaluation: **Buy Candidate**
