The stock lies in the middle of a weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the stock is expected to rise **7.88%** during the next 3 months and, with a 90% probability hold a price between **\$76.10** and **\$83.47** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Monday, July 01, 2024**, and so far it has risen 2.84%. Further rise is indicated until a new top pivot has been found. Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The stock should be watched closely. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).
