Tech commentaries:

No changes to the price of Hashgard USD stock on the last trading day (Thursday, 20th Jun 2024). During the last trading day the stock fluctuated 0% from a day low at \$0.000012 to a day high of \$0.000012. The price has fallen in 4 of the last 10 days and is down by -14.29% for this period.

The stock lies in the lower part of a very wide and weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at \$0.0000985 is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the stock is expected to rise 6.25% during the next 3 months and, with a 90% probability hold a price between \$0.0001046 and \$0.00002529 at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on Tuesday, June 18, 2024, and so far it has fallen 0%. Further rise is indicated until a new top pivot has been found. Volume gained on the last day while the price remained unchanged. This is not a classical divergence, but the stock should be watched more closely at it may be a "turning point". The very low volume increases the risk and reduces the other technical signals issued. Some negative signals were issued as well, and these may have some influence on the near short-term development. The Hashgard USD stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at \$0.00001271 and \$0.00001414. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

On the downside, the stock finds support just below today's level from accumulated volume at \$0.000011 and \$0.00001. On the upside the stock meets some resistance from accumulated volume at \$0.000013, \$0.000014.

This stock has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the stock moved \$0 between high and low, or 0%. For the last week, the stock has had daily average volatility of 4.74%.

The Hashgard USD stock holds several negative signals and despite the positive trend, we believe Hashgard USD will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this stock.

Risk: Medium

Evaluation: Sell Candidate
