Volume: **Buy**  
MACD: **Buy**

## Tech commentaries:

The **Tidal Trust li** trust price fell by **-0.0528%** on the last day (Friday, 28th Jun 2024) from **\$18.93** to **\$18.92**. During the last trading day the trust fluctuated **1.45%** from a day low at **\$18.82** to a day high of **\$19.09**. The price has risen in 6 of the last 10 days and is up by **3.87%** over the past 2 weeks. Volume has increased on the last day by **4 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **21 thousand** shares were bought and sold for approximately **\$406.40 thousand**.

The trust is at the upper part of a horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **\$19.13** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **Tidal Trust li** trust with a 90% probability to be traded between **\$17.71** and **\$18.77** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and trusts seldom manage to go directly from the bottom of a trend up to the top. Trusts turning up in the middle of a horizontal trend are therefore considered to be potential runners. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

The **Tidal Trust li** trust holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$18.80** and **\$18.77**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Thursday, June 27, 2024**, and so far it has fallen **-0.0528%**. Further fall is indicated until a new bottom pivot has been found. **Tidal Trust li** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs".

**Tidal Trust li** finds support from accumulated volume at **\$18.87** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the trust meets some resistance just above today's level from accumulated volume at **\$19.04**, **\$19.31** and **\$19.37**.

In general the trust tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the trust moved **\$0.272** between high and low, or **1.45%**. For the last week the trust has had daily average volatility of **1.06%**.

**Tidal Trust li** holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this trust since the last evaluation from a Sell to a Hold/Accumulate candidate.

**Risk: Low**
