Tech commentaries:

The **Greenroc Mining Plc** stock price gained **1.71%** on the last trading day (Friday, 28th Jun 2024), rising from **£1.75** to **£1.78**. During the last trading day the stock fluctuated **4.93%** from a day low at **£1.70** to a day high of **£1.79**. The price has fallen in 4 of the last 10 days and is down by **-18.16%** for this period. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **152 thousand** more shares were traded than the day before. In total, **152 thousand** shares were bought and sold for approximately **£270.23** thousand.

The stock lies in the lower part of a very wide and strong rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **£1.76** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the stock is expected to rise **11.24%** during the next 3 months and, with a 90% probability hold a price between **£1.96** and **£2.67** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Wednesday, June 26, 2024**, and so far it has risen 1.71%. Further rise is indicated until a new top pivot has been found. **Greenroc Mining Plc** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. Higher liquidity also reduces the general risk. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Greenroc Mining Plc** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **£1.89** and **£2.03**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

Greenroc Mining Plc finds support from accumulated volume at **£1.75** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance from accumulated volume at **£1.90**, **£2.05** and **£2.10**.

This stock may move much during the day (volatility) and with a large prediction interval from the Bollinger Band this stock is considered to be "high risk". During the last day, the stock moved **£0.0840** between high and low, or **4.93%**. For the last week, the stock has had daily average volatility of **6.52%**.

Greenroc Mining Plc holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this stock since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: **High**

Evaluation: **Hold/Accumulate**
