## Tech commentaries:

The **Hallmark Financial Services** stock price fell by **-4.20%** on the last day (Friday, 26th Apr 2024) from **\$0.679** to **\$0.650**. During the last trading day the stock fluctuated **0%** from a day low at **\$0.650** to a day high of **\$0.650**. The price has fallen in 5 of the last 10 days and is down by **-7.14%** for this period. Volume has increased on the last day by **101** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **101** shares were bought and sold for approximately **\$65.65**.

The stock lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the stock is expected to fall **-17.26%** during the next 3 months and, with a 90% probability hold a price between **\$0.465** and **\$0.800** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Monday, April 22, 2024**, and so far it has fallen 0%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Hallmark Financial Services** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$0.679** and **\$0.762**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Hallmark Financial Services** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs". The very low volume increases the risk and reduces the other technical signals issued.

There is no support from accumulated volume below today's level and given the right condition the stock may perform very badly in the next couple of days. On the upside the stock meets some resistance from accumulated volume at **\$0.716**, **\$0.81** and **\$0.81**.

This stock may move much during the day (volatility) and with a large prediction interval from the Bollinger Band this stock is considered to be "high risk". During the last day, the stock moved **\$0** between high and low, or **0%**. For the last week, the stock has had daily average volatility of **1.75%**.

**Hallmark Financial Services** holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this stock since the last evaluation from a Sell to a Hold/Accumulate candidate.

**Risk: High**

**Evaluation: Hold/Accumulate**
