## Tech commentaries:

The **BetaPro Canadian Gold Miners 2x Daily** ETF price gained **4.28%** on the last trading day (Thursday, 20th Jun 2024), rising from **\$16.82** to **\$17.54**. It has now gained 3 days in a row. It will be exciting to see whether it manages to continue gaining or take a minor break for the next few days. During the last trading day the ETF fluctuated **5.04%** from a day low at **\$16.87** to a day high of **\$17.72**. The price has risen in 6 of the last 10 days but is still down by **-7.88%** for this period. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **413 thousand** more shares were traded than the day before. In total, **437 thousand** shares were bought and sold for approximately **\$7.67** million.

The ETF lies in the middle of a very wide and strong rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **20.80%** during the next 3 months and, with a 90% probability hold a price between **\$19.70** and **\$25.63** at the end of this 3-month period.

There are mixed signals in the ETF today. The **BetaPro Canadian Gold Miners 2x Daily** ETF holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the long-term average is above the short-term average there is a general sell signal in the ETF giving a more negative forecast for the stock. On further gains, the ETF will meet resistance from the long-term Moving Average at **\$17.78**. On a fall, the ETF will find some support from the short-term average at **\$16.72**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. A sell signal was issued from a pivot top point on **Tuesday, May 21, 2024**, and so far it has fallen -12.04%. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal.

**BetaPro Canadian Gold Miners 2x Daily** finds support from accumulated volume at **\$16.81** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$18.03**, **\$18.19** and **\$19.62**.

This ETF has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the ETF moved **\$0.85** between high and low, or **5.04%**. For the last week, the ETF has had daily average volatility of **3.58%**.

**BetaPro Canadian Gold Miners 2x Daily** holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this ETF.

Risk: **Medium**

Evaluation: **Sell Candidate**
