Tech commentaries:

The **Hoppy USD** stock price gained **193.00%** on the last trading day (Tuesday, 2nd Jul 2024), rising from **\$0.00000000** to **\$0.00000000**. During the last trading day the stock fluctuated **143.70%** from a day low at **\$0.00000000** to a day high of **\$0.00000000**. The price has risen in 6 of the last 10 days and is up by **202.26%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **228 thousand** more shares were traded than the day before. In total, **245 thousand** shares were bought and sold for approximately **\$0.0007**.

The stock is moving within a very wide and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **Hoppy USD** stock with a 90% probability to be traded between **\$0.00000000** and **\$0.00000000** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **Hoppy USD** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$0.00000000** and **\$0.00000000**. A breakdown below any of these levels will issue sell signals. **Hoppy USD** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. The very low volume increases the risk and reduces the other technical signals issued. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Monday, June 17, 2024**, and so far it has fallen **-25.40%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

On the downside, the stock finds support just below today's level from accumulated volume at **\$0.00000000**. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this stock is considered to be "very high risk". During the last day, the stock moved **\$0.00000000** between high and low, or **143.70%**. For the last week, the stock has had daily average volatility of **53.21%**.

Hoppy USD holds several positive signals and is considered to be a good choice at current levels. We expect the **Hoppy USD** stock to perform great in the short-term period. We have upgraded our analysis conclusion for this stock since the last evaluation from a Hold/Accumulate to a Strong Buy candidate.

Risk: **Very High**

Evaluation: **Strong Buy Candidate**
