Tech commentaries:

The **IBEX Limited** stock price gained **2.11%** on the last trading day (Friday, 17th May 2024), rising from **\$15.16** to **\$15.48**. It has now gained 4 days in a row. It will be exciting to see whether it manages to continue gaining or take a minor break for the next few days. During the last trading day the stock fluctuated **4.09%** from a day low at **\$14.93** to a day high of **\$15.54**. The price has risen in 8 of the last 10 days and is up by **13.91%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **10 thousand** more shares were traded than the day before. In total, **39 thousand** shares were bought and sold for approximately **\$596.40 thousand**.

The stock has broken the wide and falling short-term trend up. Firstly a slower falling rate is indicated, but this may very well be an early signal of a trend shift. On the reaction, there will be support on the roof of the current trend broken, which is **\$14.59**, a level that may pose a second chance to hit a runner. According to fan-theory **\$16.82** will be the next possible trend-top level and thereby pose a resistance level that may not be broken at the first attempt.

The **IBEX Limited** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$14.74** and **\$13.93**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Wednesday, April 17, 2024**, and so far it has risen 18.80%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). **IBEX Limited** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. Higher liquidity also reduces the general risk.

IBEX Limited finds support from accumulated volume at **\$15.20** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$15.54**, **\$15.57** and **\$15.73**.

This stock has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the stock moved **\$0.610** between high and low, or **4.09%**. For the last week, the stock has had daily average volatility of **3.23%**.

IBEX Limited holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Medium**

Evaluation: **Hold/Accumulate**
