Tech commentaries:

The **Ishares Ibonds Dec 2025 Term Muni Bond** ETF price gained **0.0567%** on the last trading day (Friday, 28th Jun 2024), rising from **\$26.47** to **\$26.49**. During the last trading day the ETF fluctuated **0.0748%** from a day low at **\$26.48** to a day high of **\$26.50**. The price has risen in 6 of the last 10 days and is up by **0.17%** over the past 2 weeks. Volume fell on the last day by **-89 thousand** shares and in total, **43** thousand shares were bought and sold for approximately **\$1.13** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF is moving within a narrow and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **Ishares Ibonds Dec 2025 Term Muni Bond** ETF with a 90% probability to be traded between **\$26.51** and **\$26.56** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFS seldom manage to go directly from the bottom of a trend up to the top. ETFS turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **Ishares Ibonds Dec 2025 Term Muni Bond** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$26.48** and **\$26.45**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Wednesday, June 26, 2024**, and so far it has fallen **-0.0189%**. Further fall is indicated until a new bottom pivot has been found. Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may also not.

Ishares Ibonds Dec 2025 Term Muni Bond finds support from accumulated volume at **\$26.47** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$26.49**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF During the last day, the ETF moved **\$0.0198** between high and low, or **0.0748%**. For the last week the ETF has had daily average volatility of **0.117%**

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for **Ishares Ibonds Dec 2025 Term Muni Bond** ETF to perform well in the short-term period. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Hold/Accumulate to a Buy candidate.

Risk: **Low**

Evaluation: **Buy Candidate**
