Tech commentaries:

The **Ishares Msci Ac Far East Ex-japan Ucits** ETF price gained **0.282%** on the last trading day (Friday, 28th Jun 2024), rising from **£4,081.50** to **£4,093.00**. During the last trading day the ETF fluctuated **0.360%** from a day low at **£4,086.30** to a day high of **£4,101.00**. The price has risen in 6 of the last 10 days and is up by **0.7%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **3 thousand** more shares were traded than the day before. In total, **3 thousand** shares were bought and sold for approximately **£14.31** million.

The ETF lies in the lower part of a weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **£4,037.88** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the ETF is expected to rise **7.01%** during the next 3 months and, with a 90% probability hold a price between **£4,320.99** and **£4,645.92** at the end of this 3-month period.

The **Ishares Msci Ac Far East Ex-japan Ucits** ETF holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the ETF giving a positive forecast for the stock. On further gains, the ETF will meet resistance from the short-term Moving Average at approximately **£4,100.43**. On a fall, the ETF will find some support from the long-term average at approximately **£4,091.76**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. A buy signal was issued from a pivot bottom point on **Friday, May 31, 2024**, and so far it has risen 3.50%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal.

Ishares Msci Ac Far East Ex-japan Ucits finds support from accumulated volume at **£4,055.00** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **£4,097.50**, **£4,126.00** and **£4,192.00**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **£14.70** between high and low, or **0.360%**. For the last week the ETF has had daily average volatility of **0.454%**.

Ishares Msci Ac Far East Ex-japan Ucits holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: **Low**

Evaluation: **Hold/Accumulate**
