Tech commentaries:

The **Purpose Global Bond Class** ETF price gained **0.112%** on the last trading day (Friday, 28th Jun 2024), rising from **\$17.82** to **\$17.84**. During the last trading day the ETF fluctuated **0%** from a day low at **\$17.84** to a day high of **\$17.84**. The price has risen in 5 of the last 10 days but is still down by **-0.81%** for this period. Volume fell on the last day by **-4 thousand** shares and in total, **100** shares were bought and sold for approximately **\$1.78** thousand. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF is at the lower part of a narrow and horizontal trend in the short term, and normally this may pose a good buying opportunity, though a breakdown through the bottom trend line at **\$17.82** will give a strong sell signal and a trend shift may be expected. Given the current horizontal trend, you can expect **Purpose Global Bond Class** ETF with a 90% probability to be traded between **\$17.93** and **\$18.14** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFS seldom manage to go directly from the bottom of a trend up to the top. ETFS turning up in the middle of a horizontal trend are therefore considered to be potential runners.

A buy signal was issued from a pivot bottom point on **Thursday, June 27, 2024**, and so far it has risen 0.112%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Purpose Global Bond Class** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. On corrections up, there will be some resistance from the lines at **\$17.89** and **\$17.87**. A break-up above any of these levels will issue buy signals. Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may not be. The very low volume increases the risk and reduces the other technical signals issued.

Purpose Global Bond Class finds support from accumulated volume at **\$17.82** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$17.84**, **\$17.98** and **\$17.99**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF During the last day, the ETF moved **\$0** between high and low, or **0%**. For the last week the ETF has had daily average volatility of **0.0840%**

Purpose Global Bond Class holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Low**

Evaluation: **Hold/Accumulate**
