Tech commentaries:

The **iShares S&P/Citigroup International** ETF price gained **0.418%** on the last trading day (Wednesday, 1st May 2024), rising from **\$38.27** to **\$38.43**. During the last trading day the ETF fluctuated **1.38%** from a day low at **\$38.30** to a day high of **\$38.83**. The price has been going up and down for this period, and there has been a **-0.47%** loss for the last 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **283 thousand** more shares were traded than the day before. In total, **351 thousand** shares were bought and sold for approximately **\$13.47** million.

The ETF lies in the lower of a narrow and falling trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **\$38.25** is broken, it will firstly indicate a stronger fall rate. Given the current short-term trend, the ETF is expected to fall **-2.90%** during the next 3 months and, with a 90% probability hold a price between **\$37.14** and **\$38.62** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Tuesday, April 30, 2024**, and so far it has risen 0.418%. Further rise is indicated until a new top pivot has been found. Volume is rising along with the price. This is considered to be a good technical signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **iShares S&P/Citigroup International** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$38.46** and **\$39.17**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

iShares S&P/Citigroup International finds support from accumulated volume at **\$38.42** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$39.23**, **\$39.44** and **\$39.57**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **\$0.530** between high and low, or **1.38%**. For the last week the ETF has had daily average volatility of **0.94%**.

iShares S&P/Citigroup International holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: **Low**

Evaluation: **Hold/Accumulate**
