Tech commentaries:

The **Inspira Technologies Oxy B.H.N. Ltd.** stock price fell by **-12.13%** on the last day (Friday, 21st Jan 2022) from **\$2.72** to **\$2.39**, and has now fallen 3 days in a row. During the day the stock fluctuated **14.04%** from a day low at **\$2.35** to a day high of **\$2.68**. The price has fallen in 7 of the last 10 days and is down by **-40.84%** for this period. Volume has increased on the last day by **247 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **565 thousand** shares were bought and sold for approximately **\$1.35 million**.

The stock lies in the lower of a very wide and falling trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **\$1.63** is broken, it will firstly indicate a stronger fall rate. Given the current short-term trend, the stock is expected to fall **-6.66%** during the next 3 months and, with a 90% probability hold a price between **\$1.52** and **\$8.37** at the end of this 3-month period.

There are few to no technical positive signals at the moment. The **Inspira Technologies Oxy B.H.N. Ltd.** stock holds sell signals from both short and long-term moving averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$2.92** and **\$3.44**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Tuesday, October 26, 2021**, and so far it has fallen **-75.08%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Inspira Technologies Oxy B.H.N. Ltd.** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs".

RSI14 is **14** and the stock is extremely oversold on RSI14, but some stocks may continue to fall despite the high chance of a correction up. The low RSI lowers the general risk and the stock should be considered if other technical requirements like liquidity and risk-reward are met.

Inspira Technologies Oxy B.H.N. Ltd. finds support from accumulated volume at **\$2.35** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance from accumulated volume at **\$2.70**, **\$2.90** and **\$2.97**.

This stock may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this stock is considered to be "very high risk". During the last day, the stock moved **\$0.33** between high and low, or **14.04%**. For the last week, the stock has had a daily average volatility of **8.89%**.

Inspira Technologies Oxy B.H.N. Ltd. holds several negative signals and is within a very wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this stock.

Risk: Very High

Evaluation: Sell Candidate
