Volume: Sell  
MACD: Buy

## Tech commentaries:

No changes to the price of **International Consolidated Companies**, stock on the last trading day (Friday, 31st May 2024). During the last trading day the stock fluctuated **100.00%** from a day low at **\$0.0001** to a day high of **\$0.0002**. The price has been going up and down for this period, and there has been a 0% change for the last 2 weeks.

Given the current short-term trend, the stock is expected to rise **5.40%** during the next 3 months and, with a 90% probability hold a price between **\$0.0001** and **\$0.0002** at the end of this 3-month period.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **International Consolidated Companies**, stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. On corrections up, there will be some resistance from the lines at **\$0.0001** and **\$0.0001**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Tuesday, May 28, 2024**, and so far it has fallen - 50.00%. Further fall is indicated until a new bottom pivot has been found. Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

There is no support from accumulated volume below today's level and given the right condition the stock may perform very badly in the next couple of days. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock may move very much during the day (volatility) and with periodic low trading volume this stock is considered to be "very high risk". During the last day, the stock moved **\$0.0001** between high and low, or **100.00%**. For the last week the stock has had daily average volatility of **110.00%**.

The **International Consolidated Companies**, stock holds several negative signals and despite the positive trend, we believe **International Consolidated Companies**, will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this stock.

**Risk: Very High**

**Evaluation: Sell Candidate**
