MACD: Buy

## Tech commentaries:

No changes to the price of **InCapta, Inc.** stock on the last trading day (Monday, 6th May 2024). During the last trading day the stock fluctuated **9,900.00%** from a day low at **\$0.000001** to a day high of **\$0.0001**. The price has been going up and down for this period, and there has been a 0% change for the last 2 weeks.

The stock lies in the lower of a very wide and falling trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **-\$0.00001011** is broken, it will firstly indicate a stronger fall rate. Due to the high volatility and the trend direction we are not able to give forecast range for this stock.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume gained on the last day while the price remained unchanged. This is not a classical divergence, but the stock should be watched more closely at it may be a "turning point". The very low volume increases the risk and reduces the other technical signals issued. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **InCapta, Inc.** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. On corrections up, there will be some resistance from the lines at **\$0.00004343** and **\$0.00003914**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Thursday, May 02, 2024**, and so far it has fallen - 99.00%. Further fall is indicated until a new bottom pivot has been found.

There is no support from accumulated volume below today's level and given the right condition the stock may perform very badly in the next couple of days. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this stock is considered to be "very high risk". During the last day, the stock moved **\$0.000099** between high and low, or **9,900.00%**. For the last week, the stock has had daily average volatility of **3,960.00%**.

**InCapta, Inc.** holds several negative signals and is within a very wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this stock.

**Risk: Very High**

**Evaluation: Strong Sell Candidate**
