## Tech commentaries:

No changes to the price of **Invesco Perpetual UK Smaller Companies** stock on the last trading day (Friday, 3rd May 2024). During the last trading day the stock fluctuated **0%** from a day low of **£416.50** to a day high of **£416.50**. The price has risen in 7 of the last 10 days and is up by **4.65%** over the past 2 weeks.

The stock has broken the falling short-term trend up. Firstly a slower falling rate is indicated, but this may very well be an early signal of a trend shift. On the reaction, there will be support on the roof of the current trend broken, which is **£416.18**, a level that may pose a second chance to hit a runner. According to fan-theory **£442.70** will be the next possible trend-top level and thereby pose a resistance level that may not be broken at the first attempt.

The **Invesco Perpetual UK Smaller Companies** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **£411.71** and **£406.99**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Thursday, May 02, 2024**, and so far it has fallen 0%. Further fall is indicated until a new bottom pivot has been found. Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

**Invesco Perpetual UK Smaller Companies** finds support from accumulated volume at **£414.00** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **£417.00**, **£419.00** and **£420.00**.

In general the stock tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the stock. During the last day, the stock moved **£0** between high and low, or **0%**. For the last week the stock has had daily average volatility of **1.63%**.

**Invesco Perpetual UK Smaller Companies** holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Buy to a Hold/Accumulate candidate.

Risk: **Low**

Evaluation: **Hold/Accumulate**
