## Tech commentaries:

The **Ishares Euro Stoxx Mid Ucits Etf** ETF price fell by **-0.85%** on the last day (Friday, 28th Jun 2024) from **65.61€** to **65.05€**. It has now fallen 4 days in a row. During the last trading day the ETF fluctuated **0.86%** from a day low at **64.88€** to a day high of **65.44€**. The price has fallen in 6 of the last 10 days and is down by **-0.93%** for this period. Volume fell on the last day along with the ETF, which is actually a good sign as volume should follow the ETF. On the last day, the trading volume fell by **-9 thousand** shares and in total, **1 thousand** shares were bought and sold for approximately **93.09€** thousand.

Given the current horizontal trend, you can expect **Ishares Euro Stoxx Mid Ucits Etf** ETF with a 90% probability to be traded between **65.66€** and **72.27€** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFs seldom manage to go directly from the bottom of a trend up to the top. ETFs turning up in the middle of a horizontal trend are therefore considered to be potential runners.

There are few to no technical positive signals at the moment. The **Ishares Euro Stoxx Mid Ucits Etf** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **65.99€** and **68.88€**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Wednesday, May 15, 2024**, and so far it has fallen **-8.70%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell along with the price during the last trading day which is technical positive. One should, however, note that this ETF may have low liquidity in periods, which increases the general risk. The very low volume increases the risk and reduces the other technical signals issued.

There is no support from accumulated volume below today's level and given the right condition the ETF may perform very badly in the next couple of days. On the upside the ETF meets some resistance from accumulated volume at **69.86€**, **70.44€** and **70.60€**.

This ETF has average movements during the day, but be aware of low or falling volume as this increases the risk. During the last day, the ETF moved **0.560€** between high and low, or **0.86%**. For the last week the ETF has had daily average volatility of **0.87%**.

**Ishares Euro Stoxx Mid Ucits Etf** holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: **Medium**

Evaluation: **Hold/Accumulate**
