Tech commentaries:

The **Ishares Core Ftse 100 Ucits Etf Gbp** ETF price fell by **-0.285%** on the last day (Tuesday, 25th Jun 2024) from **£10.19** to **£10.16**. During the last trading day the ETF fluctuated **0.630%** from a day low at **£10.16** to a day high of **£10.22**. The price has risen in 6 of the last 10 days but is still down by **-0.31%** for this period. Volume has increased on the last day by **40 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **48 thousand** shares were bought and sold for approximately **£485.77 thousand**.

The ETF lies in the lower part of a weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **£10.04** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the ETF is expected to rise **6.88%** during the next 3 months and, with a 90% probability hold a price between **£10.73** and **£11.53** at the end of this 3-month period.

There are few to no technical positive signals at the moment. The **Ishares Core Ftse 100 Ucits Etf Gbp** ETF holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the longterm average is above the short-term average there is a general sell signal in the ETF giving a more negative forecast for the stock. On further gains, the ETF will meet resistance from the long-term Moving Average at **£10.30**. On a fall, the ETF will find some support from the short-term average at **£10.13**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. A sell signal was issued from a pivot top point on **Tuesday, May 21, 2024**, and so far it has fallen **-3.44%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Ishares Core Ftse 100 Ucits Etf Gbp** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs".

Ishares Core Ftse 100 Ucits Etf Gbp finds support from accumulated volume at **£10.10** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **£10.23**, **£10.30** and **£10.36**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **£0.0640** between high and low, or **0.630%**. For the last week the ETF has had daily average volatility of **0.303%**.

The Ishares Core Ftse 100 Ucits Etf Gbp ETF holds several negative signals and despite the positive trend, we believe **Ishares Core Ftse 100 Ucits Etf Gbp** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this ETF.

Risk: **Low**

Evaluation: **Sell Candidate**
