Tech commentaries:

The **Jade Currency / US Dollar** cryptocurrency price gained **0.655%** on the last trading day (Saturday, 18th May 2024), rising from **\$0.0011** to **\$0.0011**. During the last trading day the cryptocurrency fluctuated **1.12%** from a day low at **\$0.0011** to a day high of **\$0.0011**. The price has risen in 5 of the last 10 days but is still down by **-9.81%** for this period. Volume fell on the last day by **-525** shares and in total, **14** shares were bought and sold for approximately **\$0.0151**. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The cryptocurrency lies in the lower part of a very wide and weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **\$0.0011** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the cryptocurrency is expected to rise **6.59%** during the next 3 months and, with a 90% probability hold a price between **\$0.0011** and **\$0.0022** at the end of this 3-month period.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Jade Currency / US Dollar** cryptocurrency holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$0.0011** and **\$0.0013**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Wednesday, March 13, 2024**, and so far it has fallen **-46.52%**. Further fall is indicated until a new bottom pivot has been found. Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may not be. The very low volume increases the risk and reduces the other technical signals issued.

Jade Currency / US Dollar finds support from accumulated volume at **\$0.0011** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the cryptocurrency meets some resistance just above today's level from accumulated volume at **\$0.0011**, **\$0.0012** and **\$0.0012**.

This cryptocurrency may move much during the day (volatility) and with periodic low trading volume this cryptocurrency is considered to be "high risk". During the last day, the cryptocurrency moved **\$0.000012** between high and low, or **1.12%**. For the last week the cryptocurrency has had daily average volatility of **1.64%**.

The Jade Currency / US Dollar cryptocurrency holds several negative signals and despite the positive trend, we believe **Jade Currency / US Dollar** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this cryptocurrency. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this cryptocurrency since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: High

Evaluation: Sell Candidate
