## Tech commentaries:

The **Jpmorgan Etf (ireland) Icav - Eur** ETF price fell by **-0.0096%** on the last day (Friday, 28th Jun 2024) from **103.96€** to **103.95€**. During the last trading day the ETF fluctuated **0.0337%** from a day low at **103.94€** to a day high of **103.98€**. The price has risen in 7 of the last 10 days and is up by **0.13%** over the past 2 weeks. Volume fell on the last day along with the ETF, which is actually a good sign as volume should follow the ETF. On the last day, the trading volume fell by **-4 thousand** shares and in total, **2 thousand** shares were bought and sold for approximately **253.63€** thousand.

The ETF is at the upper part of a narrow and horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **103.97€** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **Jpmorgan Etf (ireland) Icav - Eur** ETF with a 90% probability to be traded between **104.73€** and **104.87€** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFs seldom manage to go directly from the bottom of a trend up to the top. ETFs turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **Jpmorgan Etf (ireland) Icav - Eur** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **103.92€** and **103.67€**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Thursday, June 27, 2024**, and so far it has fallen **-0.0096%**. Further fall is indicated until a new bottom pivot has been found. Volume fell along with the price during the last trading day, which is technical positive. One should, however, note that this ETF may have low liquidity in periods, which increases the general risk.

**Jpmorgan Etf (ireland) Icav - Eur** finds support from accumulated volume at **103.40€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **103.96€**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF. During the last day, the ETF moved **0.0350€** between high and low, or **0.0337%**. For the last week the ETF has had daily average volatility of **0.0568%**.

**Jpmorgan Etf (ireland) Icav - Eur** holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this ETF since the last evaluation from a Strong Buy to a Hold/Accumulate candidate.

Risk: **Low**
