## Tech commentaries:

The **Multi Units France - Lyxor Japan (topix)** ETF price gained **1.15%** on the last trading day (Wednesday, 26th Jun 2024), rising from **£13,244.50** to **£13,397.00**. During the last trading day the ETF fluctuated **0%** from a day low at **£13,397.00** to a day high of **£13,397.00**. The price has fallen in 5 of the last 10 days and is down by **-1.08%** for this period. Volume fell on the last day by **-230** shares and in total, **0** shares were bought and sold for approximately **£0**. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF lies the upper part of a narrow and falling trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break up at the top trend line at **£13,402.93** will firstly indicate a slower falling rate, but may be the first sign of a trend shift. Given the current short-term trend, the ETF is expected to fall **-4.36%** during the next 3 months and, with a 90% probability hold a price between **£12,296.27** and **£12,818.37** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

There are mixed signals in the ETF today. The **Multi Units France - Lyxor Japan (topix)** ETF holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the longterm average is above the short-term average there is a general sell signal in the ETF giving a more negative forecast for the stock. On further gains, the ETF will meet resistance from the long-term Moving Average at **£13,430.67**. On a fall, the ETF will find some support from the short-term average at **£13,200.93**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may not be. The very low volume increases the risk and reduces the other technical signals issued. A buy signal was issued from a pivot bottom point on **Friday, June 21, 2024**, and so far it has risen 2.11%. Further rise is indicated until a new top pivot has been found.

**Multi Units France - Lyxor Japan (topix)** finds support from accumulated volume at **£13,336.00** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **£13,484.00**, **£13,548.00** and **£13,804.50**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF During the last day, the ETF moved **£0** between high and low, or **0%**. For the last week the ETF has had daily average volatility of **0.0660%**

**Multi Units France - Lyxor Japan (topix)** holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this ETF. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this ETF since the last evaluation from a Hold/Accumulate to a Sell candidate.
