Tech commentaries:

The **K.P. Energy Limited** stock price fell by **-0.0704%** on the last day (Tuesday, 30th Apr 2024) from **426.05** to **425.75**. During the last trading day the stock fluctuated **5.18%** from a day low at **422.90** to a day high of **444.80**. The price has risen in 8 of the last 10 days and is up by **25.17%** over the past 2 weeks. Volume fell on the last day along with the stock, which is actually a good sign as volume should follow the stock. On the last day, the trading volume fell by **-543 thousand** shares and in total, **480 thousand** shares were bought and sold for approximately **204.51** million.

The stock lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the stock is expected to fall **-42.44%** during the next 3 months and, with a 90% probability hold a price between **259.67** and **399.03** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

The **K.P. Energy Limited** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **421.74** and **371.55**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Wednesday, March 20, 2024**, and so far it has risen 35.09%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. Volume fell together with the price during the last trading day and this reduces the overall risk as volume should follow the price movements.

On the downside, the stock finds support just below today's level from accumulated volume at **390.35** and **367.80**. On the upside the stock meets some resistance just above today's level from accumulated volume at **426.05**, **446.10** and **450.95**.

This stock may move much during the day (volatility) and with a large prediction interval from the Bollinger Band this stock is considered to be "high risk". During the last day, the stock moved **21.90** between high and low, or **5.18%**. For the last week, the stock has had daily average volatility of **4.32%**.

Several short-term signals are positive, despite the stock being in a falling trend, we conclude that the current level may hold a buying opportunity as there is a fair chance for stock to perform well in the short-term.

Risk: High

Evaluation: Buy Candidate
