MACD: Buy

Tech commentaries:

The **Kusama** cryptocurrency price fell by **-0.129%** on the last day (Sunday, 19th May 2024) from **\$29.57** to **\$29.53**. During the last trading day the cryptocurrency fluctuated **5.33%** from a day low at **\$28.71** to a day high of **\$30.24**. The price has fallen in 7 of the last 10 days but is still up by **1.79%** over the past 2 weeks. Volume fell on the last day along with the cryptocurrency, which is actually a good sign as volume should follow the cryptocurrency. On the last day, the trading volume fell by **-9 million** shares and in total, **1 million** shares were bought and sold for approximately **\$43.01** million.

The cryptocurrency lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the cryptocurrency is expected to fall **-46.98%** during the next 3 months and, with a 90% probability hold a price between **\$13.30** and **\$17.69** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

A buy signal was issued from a pivot bottom point on **Wednesday, May 15, 2024**, and so far it has risen 8.17%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Kusama** cryptocurrency holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the longterm average is above the short-term average there is a general sell signal in the cryptocurrency giving a more negative forecast for the stock. On further gains, the cryptocurrency will meet resistance from the long-term Moving Average at **\$29.65**. On a fall, the cryptocurrency will find some support from the short-term average at **\$28.33**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. Volume fell together with the price during the last trading day and this reduces the overall risk as volume should follow the price movements.

Kusama finds support from accumulated volume at \$29.06 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the cryptocurrency meets some resistance just above today's level from accumulated volume at **\$29.75**, **\$30.22** and **\$33.30**.

This cryptocurrency has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the cryptocurrency moved **\$1.53** between high and low, or **5.33%**. For the last week, the cryptocurrency has had daily average volatility of **4.13%**.

Kusama holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this cryptocurrency. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this cryptocurrency since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: Medium

Evaluation: Sell Candidate
