Tech commentaries:

No changes to the price of **TRONbetLive USD** stock on the last trading day (Friday, 28th Jun 2024). During the last trading day the stock fluctuated **50.14%** from a day low at **\$0.00000000** to a day high of **\$0.00000000**. The price has fallen in 5 of the last 10 days and is down by **-99.22%** for this period.

The stock lies the upper part of a very wide and falling trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break up at the top trend line at **\$0.00006** will firstly indicate a slower falling rate, but may be the first sign of a trend shift. Due to the high volatility and the trend direction we are not able to give forecast range for this stock.

There are mixed signals in the stock today. The **TRONbetLive USD** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$0.00000000** and **\$0.00001**. A break-up above any of these levels will issue buy signals. A buy signal was issued from a pivot bottom point on **Wednesday, June 26, 2024**, and so far it has risen 7.54%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume gained on the last day while the price remained unchanged. This is not a classical divergence, but the stock should be watched more closely at it may be a "turning point". The very low volume increases the risk and reduces the other technical signals issued.

On the downside, the stock finds support just below today's level from accumulated volume at **\$0.00000000**. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this stock is considered to be "very high risk". During the last day, the stock moved **\$0.00000000** between high and low, or **50.14%**. For the last week, the stock has had daily average volatility of **49.71%**.

TRONbetLive USD holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this stock.

Risk: Very High

Evaluation: Strong Sell Candidate
