The stock lies in the middle of a wide and strong rising trend in the short term and a further rise within the trend is signaled. The **Lloyds Banking Group plc** stock holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the stock giving a positive forecast for the stock. On further gains, the stock will meet resistance from the short-term Moving Average at approximately **0.654€**. On a fall, the stock will find some support from the long-term average at approximately **0.649€**. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Monday, May 27, 2024**, and so far it has fallen **-4.41%**. Further fall is indicated until a new bottom pivot has been found. On the upside the stock meets some resistance just above today's level from accumulated volume at **0.655€**, **0.660€** and **0.665€**.

In general the stock tends to have very controlled movements and therefore the general risk is considered very low.
