MACD: Buy

## Tech commentaries:

No changes to the price of **Lunatics USD** cryptocurrency on the last trading day (Saturday, 18th May 2024). During the last trading day the cryptocurrency fluctuated **0%** from a day low at **\$0.000003** to a day high of **\$0.000003**. The price has been going up and down for this period, and there has been a 50% gain for the last 2 weeks.

The cryptocurrency lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the cryptocurrency is expected to fall **-6.24%** during the next 3 months and, with a 90% probability hold a price between **\$0.0000058** and **\$0.00000533** at the end of this 3-month period.

The **Lunatics USD** cryptocurrency holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$0.000003** and **\$0.00000269**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume gained on the last day while the price remained unchanged. This is not a classical divergence, but the cryptocurrency should be watched more closely at it may be a "turning point". The very low volume increases the risk and reduces the other technical signals issued. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Monday, March 04, 2024**, and so far it has fallen -50.00%. Further fall is indicated until a new bottom pivot has been found.

There is no support from accumulated volume below today's level and given the right condition the cryptocurrency may perform very badly in the next couple of days. There is no resistance from accumulated volume above today's level and given the right condition the cryptocurrency may perform very well during the next couple of days.

This cryptocurrency may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this cryptocurrency is considered to be "very high risk". During the last day, the cryptocurrency moved **\$0** between high and low, or **0%**. For the last week, the cryptocurrency has had daily average volatility of **20.00%**.

**Lunatics USD** holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

**Risk: Very High**

**Evaluation: Hold/Accumulate**
