Tech commentaries:

The **MUL L.CAC 40 D.2X L.UC. ACC** ETF price gained **1.96%** on the last trading day (Friday, 26th Apr 2024), rising from **41.94€** to **42.76€**. During the last trading day the ETF fluctuated **5.21%** from a day low at **40.89€** to a day high of **43.02€**. The price has risen in 6 of the last 10 days and is up by **2.7%** over the past 2 weeks. Volume fell on the last day by **-106 thousand** shares and in total, **128 thousand** shares were bought and sold for approximately **5.46€** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF lies in the middle of a strong rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **12.75%** during the next 3 months and, with a 90% probability hold a price between **46.73€** and **51.17€** at the end of this 3-month period.

The **MUL L.CAC 40 D.2X L.UC. ACC** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the ETF has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **42.30€** and **42.61€**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The ETF should be watched closely. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Thursday, March 28, 2024**, and so far it has fallen **-2.40%**. Further fall is indicated until a new bottom pivot has been found.

MUL L.CAC 40 D.2X L.UC. ACC finds support from accumulated volume at **42.03€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **42.82€**, **42.94€** and **43.57€**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **2.13€** between high and low, or **5.21%**. For the last week the ETF has had daily average volatility of **2.77%**.

Several short-term signals, along with a general good trend, are positive and we conclude that the current level may hold a buying opportunity as there is a fair chance for **MUL L.CAC 40 D.2X L.UC. ACC** ETF to perform well in the short-term. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Sell to a Buy candidate.

Risk: **Low**

Evaluation: **Buy Candidate**
