Tech commentaries:

No changes to the price of **Merkur Privatbank KGaA** stock on the last trading day (Friday, 28th Jun 2024). During the last trading day the stock fluctuated **0%** from a day low at **15.00€** to a day high of **15.00€**. The price has been going up and down for this period, and there has been a -2.6% loss for the last 2 weeks.

The stock lies in the lower part of a weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **14.95€** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the stock is expected to rise **5.00%** during the next 3 months and, with a 90% probability hold a price between **15.70€** and **17.12€** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Tuesday, June 18, 2024**, and so far it has risen 0.671%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Merkur Privatbank KGaA** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **15.10€** and **15.55€**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

Merkur Privatbank KGaA finds support from accumulated volume at **14.90€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **15.10€**, **15.20€** and **15.80€**

In general the stock tends to have controlled movements and therefore the general risk is considered low. However, be aware of low or falling volume and make sure to keep an eye on the stock. During the last day, the stock moved **0€** between high and low, or **0%**. For the last week the stock has had daily average volatility of **0.672%**.

The Merkur Privatbank KGaA stock holds several negative signals and despite the positive trend, we believe **Merkur Privatbank KGaA** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this stock. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: **Low**

Evaluation: **Sell Candidate**
