## Tech commentaries:

No changes to the price of **Etracs Quarterly Pay 1.5x Leveraged** ETF on the last trading day (Friday, 31st May 2024). During the last trading day the ETF fluctuated **0%** from a day low at **\$54.39** to a day high of **\$54.39**. The price has been going up and down for this period, and there has been a -4.39% loss for the last 2 weeks.

The ETF lies in the middle of a wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the ETF is expected to fall **-2.31%** during the next 3 months and, with a 90% probability hold a price between **\$50.92** and **\$57.20** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Thursday, May 30, 2024**, and so far it has fallen 0%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Etracs Quarterly Pay 1.5x Leveraged** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$55.46** and **\$55.99**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

**Etracs Quarterly Pay 1.5x Leveraged** finds support from accumulated volume at **\$53.88** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$55.25**, **\$55.65** and **\$56.70**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF During the last day, the ETF moved **\$0** between high and low, or **0%**. For the last week the ETF has had daily average volatility of **0.185%**

**Etracs Quarterly Pay 1.5x Leveraged** holds several negative signals and is within a wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this ETF.

Risk: **Low**

Evaluation: **Sell Candidate**
