Tech commentaries:

The **The Schiehallion Fund Limited** trust price fell by **-0.775%** on the last day (Friday, 28th Jun 2024) from **\$0.97** to **\$0.96**. During the last trading day the trust fluctuated **6.25%** from a day low at **\$0.96** to a day high of **\$1.02**. The price has fallen in 4 of the last 10 days but is still up by **4.35%** over the past 2 weeks. Volume has increased on the last day by **93 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **93** thousand shares were bought and sold for approximately **\$89.31** thousand.

The trust lies in the upper part of a wide and weak rising trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break-up at the top trend line at **\$0.97** will firstly indicate a stronger rate of rising. Given the current short-term trend, the trust is expected to rise **6.80%** during the next 3 months and, with a 90% probability hold a price between **\$0.90** and **\$1.03** at the end of this 3-month period.

The **The Schiehallion Fund Limited** trust holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$0.94** and **\$0.92**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Thursday, June 27, 2024**, and so far it has fallen -0.775%. Further fall is indicated until a new bottom pivot has been found. **The Schiehallion Fund Limited** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs". The very low volume increases the risk and reduces the other technical signals issued.

The Schiehallion Fund Limited finds support from accumulated volume at **\$0.92** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the trust meets some resistance just above today's level from accumulated volume at **\$0.97**.

This trust has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the trust moved **\$0.0600** between high and low, or **6.25%**. For the last week, the trust has had daily average volatility of **4.27%**.

The Schiehallion Fund Limited holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this trust since the last evaluation from a Buy to a Hold/Accumulate candidate.

Risk: **Medium**
