## Tech commentaries:

The **Direxion Daily MSFT Bear 1X Shares** ETF price gained **0.215%** on the last trading day (Friday, 17th May 2024), rising from **\$13.97** to **\$14.00**. During the last trading day the ETF fluctuated **0.86%** from a day low at **\$13.95** to a day high of **\$14.07**. The price has fallen in 6 of the last 10 days and is down by **-3.11%** for this period. Volume fell on the last day by **-58 thousand** shares and in total, **30 thousand** shares were bought and sold for approximately **\$416.46 thousand**. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF is moving within a wide and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **Direxion Daily MSFT Bear 1X Shares** ETF with a 90% probability to be traded between **\$13.65** and **\$15.12** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFs seldom manage to go directly from the bottom of a trend up to the top. ETFs turning up in the middle of a horizontal trend are therefore considered to be potential runners.

A buy signal was issued from a pivot bottom point on **Wednesday, May 15, 2024**, and so far it has risen 0.792%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Direxion Daily MSFT Bear 1X Shares** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$14.10** and **\$14.25**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may also not.

**Direxion Daily MSFT Bear 1X Shares** finds support from accumulated volume at **\$13.90** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$14.45**, **\$14.47** and **\$14.74**.

In general the ETF tends to have controlled movements and therefore the general risk is considered low. However, be aware of low or falling volume and make sure to keep an eye on the ETF. During the last day, the ETF moved **\$0.120** between high and low, or **0.86%**. For the last week the ETF has had daily average volatility of **1.32%**.

**Direxion Daily MSFT Bear 1X Shares** holds several negative signals and is within a wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this ETF. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this ETF since the last evaluation from a Buy to a Sell candidate.

Risk: Low

Evaluation: Sell Candidate
