During the last trading day the stock fluctuated **6.99%** from a day low at **£114.40** to a day high of **£122.40**. The price has fallen in 5 of the last 10 days. Volume fell on the last day by **-330 thousand** shares and in total, **3 million** shares were bought and sold for approximately **£400.56** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The stock lies in the middle of a wide and strong rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the stock is expected to rise **14.94%** during the next 3 months and, with a 90% probability hold a price between **£127.02** and **£140.28** at the end of this 3-month period.

There are mixed signals in the stock today. A sell signal was issued from a pivot top point on **Tuesday, April 23, 2024**, and so far it has fallen -3.33%. The **Mitie Group plc** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **£115.74** and **£111.34**. A breakdown below any of these levels will issue sell signals. Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The stock should be watched closely.

On the downside, the stock finds support just below today's level from accumulated volume at **£105.80** and **£105.20**. On the upside the stock meets some resistance just above today's level from accumulated volume at **£116.20**, **£117.00** and **£119.00**.
